Understanding the Error Code: Volvo MID 136 SID 93 FMI 4 Volvo MID 136 SID 93 FMI 4 is a diagnostic trouble code (DTC) that vehicle technicians and owners encounter when assessing the health of a Volvo vehicle. This specific code indicates a problem related to the engine's intake air temperature sensor or its associated circuit. Understanding this code in detail is essential for proper diagnosis, repair, and ensuring the vehicle operates efficiently and safely. In this article, we will explore what this code means, its causes, symptoms, diagnostic procedures, and possible fixes.

Deciphering the Code: What Does MID 136 SID 93 FMI 4 Mean?

Breakdown of the Code Components

MID 136: Maintenance Identification Data - refers to the specific module or system within the vehicle that has detected the fault, often related to engine management or sensors.

SID 93: Sensor Identification Number - points to the particular sensor involved in the fault, in this case, typically the Intake Air Temperature (IAT) sensor.

FMI 4: Failure Mode Indicator 4 - indicates that the sensor's circuit is showing a "current out of range" or "intermittent" fault, often related to wiring issues or sensor malfunction.

Implications of FMI 4 in Volvo Diagnostics

FMI 4 generally suggests that the sensor is experiencing a sporadic failure or an electrical issue, such as a poor connection, damaged wiring, or a faulty sensor. This code is crucial because the intake air temperature sensor plays a vital role in engine management, influencing air-fuel mixture calculations and overall engine performance.

Function of the Intake Air Temperature Sensor in Volvo Vehicles

Role and Importance

The Intake Air Temperature (IAT) sensor measures the temperature of incoming air before it enters the engine cylinders. This data is sent to the engine control unit (ECU), which adjusts fuel injection and ignition timing accordingly to optimize combustion, emissions, and fuel economy.
