Wear Wear refers to the gradual removal of material from a surface due to mechanical action. Majumdar classified wear into various types:

- Adhesive wear:** Material transfer due to adhesion between surfaces.
- Abrasive wear:** Material removal caused by hard particles or asperities.
- Corrosive wear:** Wear accelerated by chemical reactions.
- Fatigue wear:** Surface deterioration due to cyclic stresses.

He proposed models to predict wear rates and emphasized the importance of surface hardness, material selection, and lubrication in mitigating wear.

Lubrication Lubrication reduces friction and wear, enhancing the smooth operation of moving parts. Majumdar outlined different lubrication regimes:

- Boundary lubrication:** Thin films prevent direct contact.
- Hydrodynamic lubrication:** Full fluid film supports load, minimizing contact.
- Elastohydrodynamic lubrication:** Contact area deforms elastically, affecting film thickness.
